## **OBSERVERS IN ORBIT**

Speaker: Amie Beggs, Greenbush student enrichment

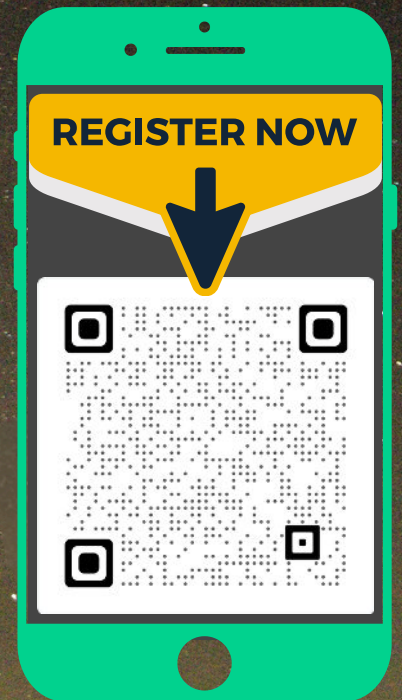

A star that glides steadily across the sky in minutes? A plane that doesn't blink? A meteor that never burns out? What are these odd little lights in the night?

They're satellites! Learn about different types of artificial satellites, where they "live," and how to spot one from your own backyard!

From the crucial technologies that depend on them to the theorized chaos they could soon create, join us as we set our sights on satellites!
